

OncoResponse

Title Research Associate/Sr. Research Associate
SUMMARY: Immunology research associate with hands on cellular immunology experience to develop antibody therapeutics.

OncoResponse Inc., a Seattle-based privately held immuno-oncology company, is harnessing the power of the human immune system to identify and develop novel monoclonal antibodies to immunosuppressive myeloid targets for cancer immunotherapy. OncoResponse recently completed a Series C financing to advance the Company's lead antibody, OR2805, into clinical development in multiple tumor types and fund a pipeline of preclinical assets to IND. <http://www.oncoresponseinc.com>.

We have two open Research Associate positions in the Immuno-Oncology group. Join a small company and make a big difference in the fight against cancer. We have a great team and offer competitive compensation, stock and benefits.

The Research/ Senior Research Associates will support the discovery and preclinical development of antibody cancer therapeutics. The successful candidate will be responsible for the design, execution, and interpretation of human and murine in vitro experiments related to the discovery and development of antibodies modulating the tumor microenvironment. Hands on experience in the characterization of human or murine cellular immune response is desired, experience with biologics in the field of cancer immunotherapy is a plus. Responsibilities of the position include execution of cell-based functional assays using human and murine primary cells and establishing readouts characterizing the selection and MOA of antibodies modulating the tumor microenvironment. The candidate will support multiple projects, work both independently and in multidisciplinary team settings to ensure timely completion of studies and is expected to present experimental findings at internal meetings and through written reports.

Responsibilities include, but are not limited to:

- Execute *in vitro* studies in collaboration with immuno-oncology project leads
- Plan and execute cell based murine and human in vitro models to characterize immunomodulatory antibodies
- Develop and implement immunological assay for antibody evaluation and specific target validation
- Manage experimental studies and timelines in a fast-paced team environment
- Work independently, establish strategies, and identify actionable undertakings that drive projects in a team environment

Qualification Requirements:

- Bachelor's or Master's degree in Immunology, Cell Biology, or related field
- Minimum of two years of experience in life science research in academia or industry
- Hands-on expertise in cellular immunology is desired
- Experience with immunosuppressive macrophages is a plus

OncoResponse offers a team-oriented, stimulating work environment. Competitive compensation, benefits and stock options are offered. Please email your resume with cover letter to: hr@oncoresponseinc.com for consideration.

OncoResponse is an equal opportunity employer
